## ***AIRCON & COCKPIT SANITISER***

Used as directed, Aircon & Cockpit Sanitiser will effectively neutralise unpleasant odours that are emitted from air conditioning systems. These odours are caused by mould and fungi that breeds in the moisture that builds up on the evaporator. Bacteria is released which can affect the health of passengers with flu like symptoms, commonly known as 'sick car syndrome'.

Aircon & Cockpit Sanitiser contains an antimicrobial agent that will eliminate the mould and fungi. The cleaning agent is non solvent and is not harmful to humans or animals, nor will it affect any components in the ventilation system or materials in the passenger cabin such as wood, leather, plastic or fabric.

The treatment has a dual benefit in that it also deodorises the interior of the vehicle. Not only does it remove the odours emanating from the ventilation system, but it also eliminates other odours such as animal smells and stale smoke smells from the interior upholstery. The treatment leaves a fresh clean odour for customer satisfaction.

### **Directions for use :**

1. Ensure that Children pets and all foodstuffs are removed from area to be sanitised
2. Remove any filters from re-circulation system if fitted.
3. Ensure all windows and doors are closed, hand break on and out of gear, start engine.
4. Switch on air conditioning system and set to lowest temperature setting.
5. Set the system to re-circulate internal air. **Do not** draw in external air.
6. Set controls to select face level facia vents and ensure that they are open.
7. Set the fan blower to half speed.
8. Position front passenger seat as far back as it will go.
9. Shake can of sanitiser well, remove cap and stand can in passenger footwell.
10. Depress trigger into lockdown position (trigger should be facing rear of vehicle).
11. leave vehicle and close door. Allow vehicle to run and can to discharge for 10 minutes.
12. Re enter vehicle, Re-set aircon controls to normal setting, leave vehicle and allow to run for a further 5 minutes.
13. Turn engine off, remove and dispose of aerosol can appropriately.
14. Open doors and allow vehicle to 'air' for 15 minutes before driving.

### **Note :**

Check that the ventilation system ducting drain pipe is not blocked, clear if necessary.  
fragrance will dissipate within 4 – 5 days as doors are opened and closed.  
Any deposits on glove box or windscreen can be wiped clean with a lint free cloth.  
Recommended usage :- every full service or minimum every 6 months
